**Selenium automates browsers. That's it!**

What you do with that power is entirely up to you.

Primarily it is for automating web applications for testing purposes, but is certainly not limited to just that.

Boring web-based administration tasks can (and should) also be automated as well.

Azure DevOps Server, formerly known as Team Foundation Server (TFS), is a Microsoft product providing a suite of collaborative software development tools. It offers version control, reporting, requirements management, project management, and CI/CD capabilities.

Jenkins is an open-source automation server used for automating tasks in software development, particularly related to building, testing, and deploying applications. It's a powerful tool for continuous integration and continuous delivery (CI/CD) workflows. Jenkins can be installed on various platforms and integrates with many tools and services.
